

17.4 **Oil shale technology status – First ATP system for FMG completes construction**

Gordon Taciuk¹, Norbert Patzelt²

¹*UMATAC Industrial Processes, Calgary, Canada*, ²*Polysius AG, Beckum, Germany*

The first Alberta Taciuk Process (ATP) System plant for the Fushun Mining Group (FMG) has completed construction and is entering the commissioning and start-up phase. This first installation in China is a 230 tonne per hour (5500 t/d) capacity, single train ATP System for commercial oil shale processing. The authors will provide an update on the project progress and an overview of the heavy engineering and special construction techniques used in this oil shale technology application.
