

18.11 **ATP technology pilot program for Jordan oil shale**

Steven Odut, Gordon Taciuk

*UMATAC industrial Processes, Calgary, Alberta, Canada*

An oil shale processing pilot program was performed on a bulk sample of ore from the Al Lajjun oil shale deposit in Jordan. A series of process performance tests were conducted with comprehensive sampling and analysis. Process operability and performance parameters were established and demonstrated. Results will be used in the establishment of the design basis for the commercial facility. We will present a pictorial/graphical overview of how the ATP Technology pilot program for the Jordan Project was conducted and the key results.
