

Panel discussion on the environmental issues related to oil shale development

Jeremy Boak¹, Steven Odut², Tõnis Meriste³, Judith Thomas⁴

¹Colorado School of Mines, ²UMATAC Industrial Processes, ³Enefit, Estonia, ⁴U.S. Geological Survey, USA

Steven Odut of Umatac Industrial Processes and Jeremy Boak of the Colorado School of Mines will moderate a panel discussion on the range of environmental issues faced by oil shale development in the U. S. and internationally. Panel members will include speakers from the Environmental Issues session at the Symposium, and will address issues of surface and ground water supply and potential contamination, oil shale ash and spent shale use and reuse, greenhouse gas intensity, air emissions, surface disturbance, environmental baseline definition and research needs. Panel members will have an opportunity for short introductory remarks, followed by a few questions to the panel or individual members of the panel. Then the discussion will be opened to questions from the floor.
